

Battling Cancer Together: Park Hospital's Comprehensive Cancer Care

Battling Cancer is among the most challenging conditions an individual can undergo. Over the years, many extraterrestrial medications have emerged to provide new solutions and pathways to efficient cancer treatment. However, choosing the correct cancer treatment hospital is still a vital decision.

Various types of Cancers:

- **Breast cancer:** A form of Cancer where breast cells mutate and become cancerous, causing patient tumors. This form of Cancer occurs in women.
- **Leukemia:** A cancer that impacts the body's blood-forming tissues. It also affects the bone marrow and lymphatic system.
- **Lymphoma:** This form of Cancer affects the body's germ-fighting systems. The lymphatic system comprises lymph nodes and various other glands, all impacted by lymphoma.
- **Colorectal Cancer:** In this form of Cancer, cells proliferate within the large intestine. This can be treated by radiation therapy, chemotherapy and targeted therapy from a promising [cancer treatment hospital](#).
- **Prostate Cancer:** this variant of Cancer originates in the prostate glands and significantly impacts men's reproductive and sexual health.
- **Sarcoma:** This cancer tumor originates mainly within the bones and connective tissues. Sarcoma can be treated through radiation and chemotherapy.
- **Pancreatic Cancer** impacts the pancreas and the organ's ability to produce enzymes to aid digestion and hormones that regulate blood flow.

How is Cancer diagnosed:

Physical tests: In specific cancer variants, such as breast cancer, there are lumps on the body that can be identified through a physical examination. Park Hospital is regarded as one of the best cancer treatment hospitals in Delhi NCR. Their team of expert oncologists can efficiently diagnose Cancer.

Lab tests: Certain lab tests conducted by cancer treatment hospitals, such as blood and urine tests, can help identify problems or underlying symptoms. Cancers such as Leukemia can be identified by blood tests that check blood count.

Imaging tests: Imaging tests provide better insight into the body and the boy's overall tissue and bone structures. Tests such as CT scans, bone scans, MRI scans, ultrasounds and X-rays can be vastly helpful in detecting cancer growth.

Why Park Hospitals is the best choice

Rated as one of the best cancer specialists in Panipat for years, Park Group of Hospitals is among the few hospitals that provide contemporary and traditional surgery. Moving beyond the concept of basic surgeries, the hospital also provides medical counselling and support.

Their treatments include surgery, radiation therapy and chemotherapy. Certain patients also assisted with immune therapies and targeted therapies to facilitate their treatment better.

Hosting comes from the nation's best medical oncologist, who is well-versed in treating distinct cancers through a series of targeted practices Park Hospitals provides:

Surgical oncology: Medical surgeries such as radiation therapy and chemotherapy focus extensively on or treating the patients by removing the cancerous cells and tumours from the patient's body. Surgical oncology is a complex medical procedure requiring assistance from highly skilled cancer treatment hospitals and medical facilities.

Radiation Oncology: This treatment incorporates high-energy radiation to better control and limit cancer growth or reduce symptoms caused by Cancer. At the [Park Hospital](#), we offer internal and external beam radiation therapy designed to be efficient and safe for all patients.

Offering additional treatments for breast cancers, bone marrow transplants, lumpectomy, mastectomy, biopsy and radical mastectomy. Park hospitals offer just the treatment you need.
