

## What is Anaconda 120 mg?

**Anaconda 120 mg** is a generic viagra contains Sildenafil Citrate as an active ingredient used in the treatment of male **erectile dysfunction / impotence**. Anaconda 120 mg (generic Viagra – Sildenafil) is a **PDE5 inhibitor** used to achieve a firm **erection** during **intercourse** in men with erectile dysfunction / impotence. It works to improve blood flow to the penis by relaxing smooth muscles & by expanding **blood vessels** to get easy blood flow in the penile region. If we are getting a sufficient amount of blood flow to the penis that results in achieving a firmer erection. Anaconda 120 mg is also known as Sildigra 120 mg, Red Viagra pill & Cobra 120 mg.

## How does Anaconda 120 mg Tablet Work?

Anaconda 120 mg (Sildigra) is an effective viagra pill used in men suffering from erectile dysfunction (impotence) to achieve an erection during intercourse for specific period of time when a man is sexually stimulated but not able to maintain a hard penis erection. It works to promote blood flow to the penis to achieve an erection during intercourse by supplying an adequate amount of blood flow to the penile area. It works to relieve smooth muscles present in blood vessels to get easy blood flow in the penile region. Optimal blood trap in the male genitalia is a criterion for a hard and firm erection. The medicine also inhibits the erection preventive action of an **enzyme** called phosphodiesterase (PDE5), making it possible for the erection to sustain longer during **sexual intercourse**. Anaconda 120mg belongs to a class of drugs known as PDE5 inhibitors.

The effect of a single dose of Anaconda 120mg can last up to 4 hours into taking it, with the peak effects occurring about 2 hours into its ingestion.

*RSM Enterprises manufactures Anaconda 120mg tablets.*

## How to Take Anaconda 120 mg Tablet? [Dosage]
