INTRODUCTION

ULTRASOUND FACIAL

At Yorkshire Skin Centre in Leeds, we provide an innovative, non-invasive imaging tool that utilises safe sound waves to capture detailed images of the face and neck, eliminating the need for exposure to potentially harmful ionizing radiation. We are proud to be one of the first adopters of Clarius Facial Ultrasound in the UK.

ABOUT

Clarius Facial Ultrasound is a cutting-edge, non-invasive imaging technology that utilises high-frequency sound waves to create detailed images of the underlying structures of the face.

**No exposure to
harmful radiation**

**Visualisation of
multiple skin layers**

ABOUT FACIAL ULTRASOUND

NO EXPOSURE TO HARMFUL RADIATION

Unlike X-rays and other imaging techniques, Clarius Facial Ultrasound does not expose patients to ionising radiation or other harmful effects.

VISUALISATION OF MULTIPLE SKIN LAYERS

Clarius Facial Ultrasound allows healthcare providers to visualise not just the outer layer of the skin, but also deeper layers including fat layers, muscles, ligaments, and the bony skeleton.

BENEFITS OF FACIAL ULTRASOUND TREATMENT

The benefits of facial ultrasound treatment as follows

Detailed Visualization
of skin layer

Assessment of Skin
Health

Guidance of aesthetic
procedures

Monitoring of Treatment Outcomes

THANK YOU
